

Green Society while making Green

Go Green!

13 CLIMATE
ACTION

Background

- As a group we decided to deal with SDG Goal 13: Climate Action. Pollution is a big factor contributing to climate change. Go Green! is a project that focuses on minimizing pollution through recycling. The site will advertise recycling centers dealing with different kinds of waste.

Project Information

- Go Green! will assist street recyclers effectively identify recycle centers and make a living in recycling. With the use of the website households will be able to help reach SDG Goal 13 by helping street recyclers in effectively sorting waste at home and dropping it off for the street recyclers to collect from a drop off/ collection zone identified beforehand.
- Also the platform will make recycling bags available for purchase by households.
- Businesses will also have an opportunity to connect with individuals in showcasing the kind of recycling they engage in.
- Individuals will also be able to donate recycle bags and money to the recycling initiatives in their neighborhoods.

- This Application will work to benefit the environment and work to reverse the damage done by pollution and decrease the effects of climate change. Proper waste management will benefit the environment while empowering street recyclers and affording households and individuals an opportunity to give back the the community and the environment.
